

Energy, Utilities and Telecommunications

The Energy, Utilities and Telecommunications practice of Pullman & Comley offers a wide range of legal services to assist clients in responding to the opportunities and requirements of the energy, utility and telecommunications markets throughout the New England region and the country. This practice incorporates the firm's extensive transactional and regulatory experience in:

- Electricity and power markets
- Power plant development and financing
- Energy procurement, conservation and demand-side management
- Natural gas markets
- Emerging alternative energy and biofuels
- Water utilities and water treatment
- District steam heating and chilled water
- Wireless and wireline telecommunications

Our attorneys deliver practical, focused results for our clients. We deal with every aspect of energy, utility and telecommunications practice, including real estate, leasing, regulatory proceedings, rate setting, siting and land use, interconnection, environmental law, taxation, business, project and operational finance and litigation.

Attorneys in this practice have extensive experience before federal and state agencies, including: the Federal Energy Regulatory Commission, Connecticut Department of Public Utility Control, Connecticut Department of Environmental Protection, Connecticut Energy Advisory Board, Connecticut Siting Council, Massachusetts Department of Public Utilities, and the Massachusetts Department of Telecommunication and Cable, as well as similar agencies around the country.

Our attorneys also have extensive experience before state siting councils and regularly practice before local zoning, wetlands and land use agencies with respect to the siting of electric generating facilities, telecommunications towers and antennas, water treatment facilities, fuel pipelines, transmission lines and substations as those agencies balance the impacts and public benefits of various projects.

Our attorneys have experience in the cutting-edge issues facing the energy and utility sectors, such as competitive energy pricing and procurement, power plant development, energy contracts, licensing of competitive suppliers, renewable energy, distributed generation, project financing, conservation and load management, metering and transmission enhancements and biofuels. In
