

## Expanding the Reach of Health Care Innovation

### InSite One

InSite One is at the forefront of cloud-based medical archiving, allowing health care organizations to simplify data retention, reduce associated costs, and share images and records among medical professionals to help the effective diagnosis and treatment of illnesses. In 2010, we represented Wallingford-based InSite One in its sale to Dell, the health care industry's leading provider of information technology services. The acquisition will allow Dell to move its archiving to the cloud, helping its hospital customers reduce the cost of data storage and retention and improve the delivery of health care. As part of Dell, InSite One will reach more customers and have an even greater impact on medical innovation and the improvement of patient care.
